Sketch out the game layout into your home learning book (or onto any piece of paper)

Roll a 10-sided dice - if you do not have access to one at home, you could use this virtual one!

<https://rollthedice.online/en/cdice/10-sided>

Select which box you want to place the number into.

Then it is your partners turn. The winner is the person who creates the biggest number.

Use the inequality symbols $<$ $>$ to show which is the biggest number.

There are two ways to find a winner in this game.

SCORES 1: highest number wins a point, first player to 10 points is the overall winner.

SCORES 2: subtract the lower number from the higher number, these are your points. The first person to reach 10, is the overall winner
